

Tutorial05 - adding QR Scanning - Logistics Example

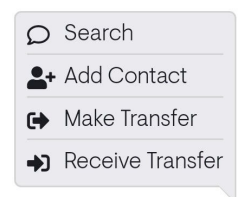

1 Add the new functionality

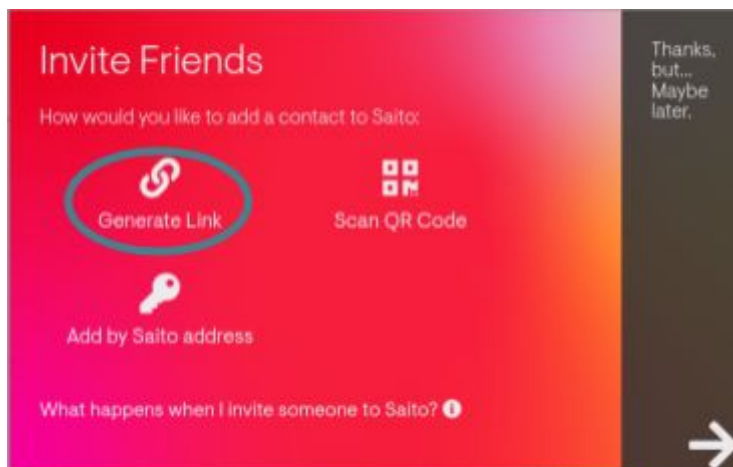

Navigate to saito.io/email and select Appstore.

Locate Tutorial05 and click install. Follow the process through. The site will reload and the new functionality is available in the Chat application.

We can see, Make Transfer and Receive Transfer options in the Chat menu. We can test these out on a phone!

2 Distribute Software

On the saito.io site - select the “+” icon next to chat, and click ‘Generate Link’

Send this link to your phone any way you choose. (Pro-tip, you can use saito messaging for this if you like).

Opening the link in your phone will create a wallet and connect your phone to the chain.

To test, open chat in the browser and select ‘Receive Transfer’ and ‘Make Transfer’ on your phone - then SCAN.

Scan the code - and you will receive a confirmation message. This message could form any confirmed part of a supply chain process.
